

## Homework Assignment, due Wednesday 2/4 at 5pm

The assignment is to create a valid html document and its associated style sheet. Please email me two files, one called index.html (which will contain your markup) and another called style.css which will contain your styles.

### **Your html document should:**

1. contain at least one of each of the following tags, properly closed and/or nested. <html>, <head>, <link>, <body>, <h1>, <h2>, <p>, <ul> and <li>, <a>, <img>.
2. have at least three paragraphs of text. It doesn't matter what the text is. Feel free to use a [lorem ipsum](#) generator such as [this one](#), or [this one](#), or even [this one](#).

Please run your html document through W3C validator service at <http://validator.w3.org/>. Your document should pass validation (feel free to ignore any warnings).

### **Your css document should:**

1. set the following properties on at least one element: color, font-family, font-size, border, height and width;
2. make the text in your paragraphs have justified alignment (you'll have to Google this one, for sure)

Hint: your style sheet will be hooked up to your html document using the link tag:  
<link rel="stylesheet" type="text/css" href="style.css" />

If you like, you can work on your html/css in jsbin.com, but you will want to use the Atom Editor to create the two separate files to be turned in. The two files should be emailed to me (jmitchel@loyno.edu) as attachments. If you're feeling adventurous, try to upload them to your server and just send me the url for your index.html page. If you have questions or problems, feel free to get in touch.
