

Homework Assignment, due Wednesday 2/12 at noon.

For this assignment, we are going to start building the app we discussed yesterday. The app is going to be a simple tool for Louisiana lawyers to search and save court cases relevant to our jurisdiction (U.S. Supreme Court, U.S. 5th Circuit, and Louisiana Appellate Courts) using the [CourtListener API](#). The app is going to be called “Gavel” (Why? Because I’m the teacher and I get to pick). For the first step, we are going to design most of the UI (user interface).

You should provide me a single page of html which looks like this:

The mockup shows a web application header with a logo and navigation links. Below the header is a search bar with a placeholder text and a dropdown menu for search criteria.

 GAVEL	Search	Help	About

Yes, this is much harder than last week’s assignment! To help you out, I’ve created a [jsbin template](#) to get you started. Once you have opened the template in jsbin, make a clone of it (File -> Clone) to start your own version. In the template, I have included comments (looks like: `<!-- Comment -->`) that give you hints about where to look in the Bootstrap docs. Follow them.

Submit this assignment to me by emailing me the link to your bin (e.g., Click “Share” in the menu and send me the URL). Please feel free to ask 1) Google, 2) me, or 3) your classmates for help on this assignment. Good luck!
